INJURIES. UNSAFE ACTS. RISKY BEHAVIOUR.

DuPont Sustainable Solutions
What is STOP®?

The award-winning DuPont™ STOP® program provides a path to workplace safety excellence by making safe behavior and workplace conditions part of the work culture — thus preventing injuries and incidents. For more than 30 years, thousands of companies and government organizations worldwide have realized the benefits of this program, not only in human terms — but as real dollars and cents.

STOP®, a safety training observation program, has been used throughout the world by DuPont as well as many other organizations. The objective of the program is to stop injuries by improving safety observation skills and helping people talk with others about safety. It teaches employees to recognize safe and unsafe conditions as well as safe and unsafe acts.

The Three-Part Approach

STOP® programs use proven instructional design in a combination of tested training methods to give people the information, skills and willingness to work more safely; to maximize their learning; and to apply what they learn to the real world. The programs feature a three-part approach:

- Individual self-study. Workbooks are used to introduce basic concepts and to begin safety skill development.
- Field application activities. STOP® program participants practice what they have learned in their own work areas.
- Group meetings. After viewing a DVD, participants discuss what they have learned and consider how it can be applied.

“It was a mixture of ‘wow, it does work’ and a heightened awareness of safety. When you actually have proof that incidents are down, and expenditures, people take it seriously. And they begin to think that maybe they should look into this too.” -Mary Ellen Donner, Director, Parks and Recreation Department, City of Henderson
STOP® is based on tested principles that have been proven to reduce incidents and injuries:

- All injuries can be prevented.
- Employee involvement is essential.
- Management is responsible for preventing injuries.
- All operating exposures can be safeguarded.
- Training employees to work safely is essential.
- Working safely is a condition of employment.
- Management audits are a must.
- All deficiencies must be corrected promptly.
- Off-the-job safety will be promoted.

Components may include*:

- Implementation Assistance Workshop
- DVD
- Participant’s Workbook
- Administrator’s Guide
- Leader’s Guide
- Discussion Aid CD

- Observation Cards
- Observation Checklists
- eLearning Courses
- STOP DataPro®
- STOP® Assessments

*Components vary by program. Some components are an additional fee. Contact a representative for more information.
STOP® for Supervision

STOP® for Supervision is based on the idea that leaders are accountable for the safety of their employees. It builds safety observation and communication skills, enabling constructive discussions with employees about safe and unsafe work practices.

Important STOP® for Supervision concepts include:

- All injuries and occupational illnesses can be prevented.
- Supervisors and team leaders are responsible and accountable for the safety of their employees.
- Seeing safety.

STOP® for Each Other

STOP® for Each Other teaches that safety is everyone’s responsibility. It is designed to help participants look at safety in a new way, so they can help themselves and their co-workers work safely. During the program participants develop their safety awareness and talk with others about all aspects of safety.

STOP® for Each Other is especially well suited for delivery to any peer group or personnel in team-based or flat organizations that have personal responsibility for their safety and the safety of co-workers. It also works well for organizations that have used STOP® for Supervision and wish to train non-supervisory personnel or to conduct refresher training in safety.

Important STOP® for Each Other concepts include:

- Seeing safety.
- We depend on each other.
- Show me you care, make me aware.

*Oil & Gas versions of both programs are available.

“The quality of the program was the deciding factor (for choosing STOP®). It’s very comprehensive, easy and inclusive.”

- Michael Francis, Safety Officer, City of Henderson
STOP® for Healthcare

STOP® for Healthcare is deeply rooted in the idea that safe people equals safe patients. The program focuses on everyday safety by motivating staff to engage in peer-to-peer communication to enhance safe working conditions and safe actions around patients and each other.

Core principles of STOP® for Healthcare include:

- All injuries and work-related illnesses are preventable.
- Everyone has an obligation and the ability to correct an unsafe situation.

STOP® for PSM

STOP® for PSM provides employees a tool for process hazard awareness and risk reduction through observation. It aims to help engage front line employees and enhance their level of process hazard awareness.

STOP® for PSM focuses on three major observation categories:

- Personnel.
- Facilities.
- Technology.

STOP® for Ergonomics

STOP® for Ergonomics prepares participants for making ergonomic observations and identifying ergonomic issues in the workplace. Through ergonomic safety audits and peer-to-peer communication, these observations are key to implementing safe ergonomic practices that improve performance.

Important STOP® for Ergonomics concepts include:

- Complete prevention.
- Safety in numbers.
- We depend on each other.

“Using STOP® breaks down the hierarchy, those barriers to speaking out, so we can improve safety. It empowers people and encourages them.”

- Mary Ellen Donner, Director, Parks and Recreation Department, City of Henderson
**STOP® Implementation Assistance Workshops**

The **STOP® Implementation Assistance Workshop** (IAW) is a two-day train-the-trainer workshop designed to prepare leaders to implement **STOP®**.

The workshop is conducted by **STOP®** experts and is provided before your organization begins **STOP®** training.

In addition to the workshop itself, an on-site IAW also includes a walk-through discussion about **STOP®** implementation with senior management and a brief safety audit conducted by the **STOP®** expert with one of your managers.

Attendees of both on-site and open IAWs will learn about **STOP®** objectives, techniques and observation practices as well as the most effective ways to implement these programs at individual sites.

**STOP® Assessments**

A DuPont™ **STOP®** expert will conduct an objective assessment of your **STOP®** implementation at your site. The expert will work with your implementation leader to review the success of the implementation, identify gaps and recommend next steps for improvement in your **STOP®** program.

This service is appropriate any time following your **STOP®** implementation; however, it is usually conducted after a **STOP®** program has been in place for a minimum of six months.

**STOP® Refresher Training**

This four-hour workshop is for current users of **STOP®**. It reviews, reinforces, and upgrades participants’ existing knowledge and skills of the DuPont™ **STOP®** program. During the workshop you’ll also look at ways in which you’ve grown in seeing safety since implementation and areas that may need additional focus.
STOP DataPro®

STOP DataPro® is a secure web-based application that makes it easy to record and analyze safety performance data gathered on the STOP® observation checklists. The insights derived from STOP DataPro® provide actionable knowledge that can help lead to better workplace safety decisions and improved safety and operational performance.

Benefits of DataPro®:

- Rapid feedback on the observation process is available through automatic integration of safety observation data into reports
- Secure and confidential database protects safety observation data, customer information and reports
- Improve safety communication through reports that increase awareness of workplace safety issues
- Prevent potential injury through trend observation and corrective actions

Use the new mobile app to record and upload your observation data!

- Capture safety observations using your iOS or Android device
- Use your company’s custom checklists
- Save time and reduce use of paper checklists
- Edit observations at any time prior to syncing
- Sync observations back to STOP DataPro® via WiFi or data connection
- Observations are synced into authorized approval queue in STOP DataPro®

“STOP DataPro® is an easy system to understand, it’s web-based so that tech support is streamlined, it has very good reporting capabilities, it has very good statistical reports that are preloaded, and it’s a standardized process.”

- David Pearce, Senior Human Resources Generalist, Moen
