

Make a big impact with Microlearning

Demonstrate your organization's commitment to safety and employee development by providing convenient access to just-in-time microlearning courses from DuPont Sustainable Solutions. These programs complement our full-length training courses by delivering just the information employees need to know, right when they need it.

Our new microlearning library features e-learning courses that are built in HTML5, include a quiz, and are designed to take five minutes or less to complete. The video courses are two minutes or less in length, include a facilitator's handout, and can be delivered via a USB drive or streaming video.
